## Press Release

### **Consumer confidence in Ukraine, May 2019: index equaled 82,8.**

According to the data provided by Info Sapiens “Consumer confidence of Ukrainians”, that is for support of Dragon Capital, the Consumer Confidence Index (CCI) equals 82.8 in May, which is 11.2 points higher than the indicator in April. Indices of Expected Economic Conditions in the Country Over the Next Year and Expected Changes in Personal Financial Standing experienced the most significant changes.

In May 2019, the Consumer Confidence Index (CCI) equaled 82.8 that is 11.2 points higher than the indicator in April.

*Index of the Current Situation (ICS)* increased by 6.2 points to the level of 71.4. The components of this index have changed as follows:

- *Index of Current Personal Financial Standing (x1)* equaled 60.6, which is 10.1 points higher than the indicator in April;
- *Index of Propensity to Consume (x5)* increased by 2.4 p. and reached the indicator of 82.3.

In April, *Index of Economic Expectations (IEE)* increased by 14.5 points to the level of 90.4. The components of this index have changed as follows:

- *Index of Expected Changes in Personal Financial Standing (x2)* increased by 15.2 points comparing to the previous month and reached 86.2;
- *Index of Expectations of the Country's Economic Development Over the Next Year (x3)* increased by 16.0 points and equals 90.0;
- *Index of Expectations of the Country's Economic Development over the Next 5 Years (x4)* increased and equals 95.2, which is 12.4 points higher than in April.

In May, the indicator of *Index of Expectations of Changes in Unemployment* equaled 109.6, which is 0.3 points lower than previous month. Meanwhile, *Index of Inflationary Expectations* decreased and equals 175.8 which is 2.1 points lower than last month. The expectations of Ukrainians regarding the hryvna's exchange rate in the coming three months also have improved: *Index of Devaluation Expectations* decreased by 20.2 points and reached the level of 123.4.

«The second month in a row the Consumer Confidence Index grows rapidly. In May 2019 the Index reached the level of year 2013 and overcame the mark of 100 points in Kyiv. Such growth is the result of the voter's optimism concerning the new President installation and future Parliament elections. Indices of Expected Economic Conditions next year and Expected Changes in Personal Financial Standing experienced the most significant increase. Positive consumer confidence is also the result of stable situation on the currency market which is seen as Devaluation Expectations Index decrease» – Info Sapiens analysts comment.

Dynamics of the Consumer Confidence Index in Ukraine (16+ target group)						
Month, year	Consumer Confidence Index (CCI)	Index of the Current Situation (ICS)	Index of Economic Expectations (IEE)	Index of Expectations of Changes in Unemployment (IECU)	Index of Inflationary Expectations (IIE)	Index of Devaluation Expectations (IDE)
05'19	82,8	71,4	90,4	109,6	175,8	123,4
04'19	71,6	65,2	75,9	109,9	177,9	143,6
05'18	62,9	60,3	64,6	125,5	190,4	149,5

*How the indices are calculated*

The survey «Consumer confidence in Ukraine» was conducted by GfK Ukraine since June 2000. From 2019 this project is provided by Info Sapiens. From January 2009 consumer confidence survey is conducted on a monthly basis.

In Ukraine, the Consumer Confidence Index is determined through a random survey of domestic households. The poll involves 1,000 individuals aged 16+. (Up to April 2014 the poll involved 1,000 respondents aged 15-59). A representative sample is selected by gender and age, also by type and size of settlement. In April 2014 Autonomous Republic of Crimea was excluded from the sample of consumer confidence research in Ukraine. The margin of error is 3.2%. The survey is carried out on 1-15th every month. To define the CCI, respondents are asked these questions:

1. How has the financial standing of your family changed over the last six months?
2. How do you think your family's financial standing will change in the next six months?
3. Looking at economic conditions in the country as a whole, do you think the next 12 months will be good or bad?
4. Looking at the next five years, will they be good ones or bad ones for the country's economy?
5. In terms of large purchases for your home, do you think now is generally a good time or a bad time to make such purchases?

Each of these questions is related to a corresponding index:

**Dragon Capital**

- *Index of Current Personal Financial Standing (x1);*
- *Index of Expected Changes in Personal Financial Standing (x2);*
- *Index of Expected Economic Conditions in the Country Over the Next Year (x3);*
- *Index of Expected Economic Conditions in the Country Over the Next 5 Years (x4);*
- *Index of Propensity to Consume (x5).*

*Indices are constructed thus: the share of negative answers is deducted from the share of positive answers, and 100 is added to this difference in order to eliminate negative values. On the basis of these five indices, three aggregate indices are calculated:*

- *Consumer Confidence Index (CCI) as the arithmetic average of indices x1–x5;*
- *Index of the Current Situation (ICS) as the arithmetic average of indices x1 and x5;*
- *Index of Economic Expectations (IEE) as the arithmetic average of indices x2, x3, and x4.*

*Index values range from 0 to 200. The index equals 200 when all respondents positively assess the economic situation. It totals 100 when the shares of positive and negative assessments are equal. Indices of less than 100 indicate the prevalence of negative assessments.*

*To determine the Index of Expected Changes in Unemployment (IECU), the Index of Inflationary Expectations (IIE) and the Index of Devaluation Expectations (IDE), the respondents are asked these three questions:*

- 1. Do you think that within next 12 months the number of unemployed (people who do not have job and are looking for work) will increase, will remain roughly the same, or will decrease?*
- 2. How do you think that prices for major consumer goods and services will change in the next 1–2 months?*
- 3. How do you think the USD value will change towards the UAH value during the next 3 months?*

*The IECU, the IIE and the IDE are calculated thus: the share of answers that indicate a decrease of unemployment/inflation/devaluation is subtracted from the share of answers that indicate the growth of unemployment/inflation/devaluation, and 100 is added to the difference to eliminate negative values. The values of indices can vary from 0 to 200. The index totals 200 when all residents expect an increase in unemployment/inflation/devaluation.*

## About Info Sapiens

Research agency Info Sapiens specializes in public opinion polls, behavioral studies and secondary data analysis. Our team complies with the ICC/ESOMAR International Code of Marketing and Social Research Practice.

Info Sapiens provides fieldwork for GfK Ukraine projects and also independently conducts research projects, namely social and political surveys including «Consumer confidence in Ukraine». More information about the company and its services is available on the [website](#) or [facebook page](#).
